1. The security team must review access every 30 days.

Fictional Acorn encrypts stored proposal evidence using AES-256. The fictional security team reviews access every 30 days.
Fictional archive delivery experience: a public-domain archive pilot with 20,000 fictional records. No real customer is named.
Fictional ISO 27001 certificate: expires 2027-12-31. This is synthetic test data, not an actual certification claim.
Fictional delivery capacity: two assigned engineers are available for a twelve-week library archive project. The twelve-week plan includes requirements, implementation, accessibility checks and handover.
Fictional employee count: 12. Strategic fit: public-domain library archive services.
Fictional accessibility test report: keyboard navigation and document headings checked for the fictional pilot.
This is synthetic testing evidence and not a real customer claim.

2. The buyer must clarify this conflict before the final response.

Synthetic reviewer disposition: the buyer clarification item is resolved by the explicit twelve-week amendment and is excluded without deleting its source record.

3. The supplier must describe relevant archive delivery experience.

Fictional Acorn encrypts stored proposal evidence using AES-256. The fictional security team reviews access every 30 days.
Fictional archive delivery experience: a public-domain archive pilot with 20,000 fictional records. No real customer is named.
Fictional ISO 27001 certificate: expires 2027-12-31. This is synthetic test data, not an actual certification claim.
Fictional delivery capacity: two assigned engineers are available for a twelve-week library archive project. The twelve-week plan includes requirements, implementation, accessibility checks and handover.
